

Innovation In Safety Management

New technologies are contributing to the success of organizations in the ever-changing environment within our industries. These solutions are designed to make production processes more clear, efficient, and safer.

Solutions At Work (SAWs)

The Signal Safety Committee have established relationships with the following vendors in various product and service categories. These solutions mitigate risk in the work environment to reduce the risk of employee injury. Consider exploring a use case for these SAWs to improve safety performance and culture within your organization.

Solving Safety

AI / Intelligent Solutions

AI enhances safety by monitoring hazards, predicting risk, improving training, and enhancing decision-making.

Safety Information Mgmt. Systems

SIMs help companies improve accountability and achieve continuous improvement through data management.

Workplace Monitoring

Worker behavior and environmental conditions are evaluated for safe work practices and compliance standards.

Evolved Training

Move beyond compliance and achieve competency with interactive and immersive AR & VR training solutions.

Ready to Work - Wellness

New approaches are available to ensure workers are ready to work safely and maintain wellness on the job.
